

## Dear LX521 Lovers,

**Recently, Siegfried Linkwitz was honoured with ALMA's Titanium Driver Award. It recognizes a specific technical contribution, accomplishment or expertise in the loudspeaker industry.**

**We want to celebrate this with the launch of Siegfried Linkwitz' reference design LX521 as fully assembled speaker series.**

**...and the TITANIUM DRIVER AWARD promotion:  
The first ten pairs ship at a promotional price !**

TheAudioCritic.com (Peter Aczel):

The speakers naturally disappear as soon as you start the music; you don't even have to close your eyes....I would go even further—you have to make a slight mental effort to be aware that the speakers are actually there! It's uncanny.

The precise phantom images produced by the LX521 create the most solidly three-dimensional soundstage of any stereo system in my listening experience.

**The fully assembled and finished LX521s are carrying  
12 SEAS drivers and matched/enhanced crossover parts.  
Of course, extras and goodies like hidden cabling,  
slim bridge feet and Speakon plugs are included.**

**As soon as our first production batch is sold, the special pricing of TITANIUM DRIVER AWARD promotion ends.**

**We offer the first ten pairs of LX521 all black, top-baffles white, in basic configuration for only €2990€ ! €3790 with ASP. (inside EU shipment: add 19% VAT)**

**Top-baffles and bridges may be altered to get your personal version of the LX521, TITANIUM series:**

**fine veneered multilayer plywood**

**Cherry**

**Makassar**

**Bubinga**

**3-layered massive wood**

**Oak**

**Bamboo/coffee**

**Black Walnut**

**or Panzerholz B25 top-baffles, dull black finish**

**Checkout the unique sonic properties of this high tec material [here](#).**

**Panzerholz is applied e.g. as dampening chassis in race cars and bullet proof doors.**

**The raw material is more than 10x the price of birch plywood and needs high quality tools**

**for cutting/milling. It's twice as heavy (1,4) as birch plywood (0,7).**

**All woofer V-frames and baffle supports come finished in dull, black MDF  
>>>> For pricing and ordering , just fill in and return the attached xls-file.**

## **Electronics for the LX521**

### **ASP**

**comes with ARTA test protocols. The critical components have the same or better tolerances than specified (PP caps 1or2%):**

**ASP pbc's are enclosed in a precious custom- made case with a 3mm thick (!) aluminium body, that provides good shielding. Finished with dark graphite powder-coating.**

**The subcut switches multifold parallel switching reduces contact resistance in the signal path. Silver plated, PTFE insulated high quality wires are used in the signal path.**

**Lasered "magicLX521" logo with several backlight options..**

**The ASP can handle balanced and unbalanced inputs.**

**Tweeter and woofer level adjustments (see pink noise test in the construction manual) can be easily performed from outside via small openings at the top .**

**ca 44x36x5,5 cm**

### **ASP-select**

**upgrade by using manually selected PPcaps with tolerances of max +/-0,5% accepted. For tighter L/R channel channel matching.**

**Only a limited number of those boards is available.**

**The ASP feeds your 6 or 8 channel amplifier (e.g. ATI or Emotiva)**

....or go for the integrated solution: 44 x 36 x 5,5 cm

## The LX521 PowerBox

**Our first PowerBoxes are running their long term tests successfully. The neutral sound of Hypex amplification is an excellent match for the neutral Reference Monitor LX521. Dimensions 44x36x5,5 cm.**

**We are looking for interested beta testers for the PowerBox. 110V and 220V versions available.**

**Contact [info@magicLX521.com](mailto:info@magicLX521.com) for details. (special beta-tester kit prices apply)**
